

The UNIT 6 of the training programme consists of a series of 6 webinars, each covering one of the following Blue Economy sectors: marine renewable energies, marine biological resources, oil & gas, maritime transport, marine/coastal tourism and emerging sectors (e.g blue biotechnologies). Each webinar will address interdisciplinary issues such as market characterization, driving policies and key challenges and opportunities

Coming from the European Union or the United Kingdom, the audiences for this training come from various private and public professional backgrounds: entrepreneurs, business leaders, researchers, advisers to incubation agencies, in charge of promotion of research. All have in common the objective of knowing the socio-economic context conducive to the development of innovative activities in the field of blue growth.

A project in cooperation with the Digital Learning Lab hosted in Hall 6, supported by the Department of Executive Training of the University of Nantes.
